

CIPGuard Automate Your NERC CIP Compliance with CIPGuard

CIPGuard solutions incorporates Promia Raven™ technology with over 10 years of product development and deployment within the US Department of Defense, where it has won multiple awards for technological innovation for cyber-security. Over the past five years, Raven has become the leading information assurance product for the U.S. Department of Navy cyber infrastructure where it is now currently being globally deployed across all US Naval installations and ships. Nexant and Promia have adapted Raven's unparalleled capabilities for system management and cyber defense to support NERC CIP compliance requirements by developing specialized user interfaces that aggregate, track and document information in easy to use formats using military grade workflow management capabilities.

Our consultants will work with you to ensure that your NERC CIP compliance program will result in compliance with the standards. If we find that your current plan will not result in compliance, we work with you to develop a plan that will allow you to economically and efficiently move to compliance. CIPGuard solutions will seamlessly perform within your network to collect and maintain critical cyber asset information. Thereafter, we will be available to support your compliance efforts on an as-needed basis.

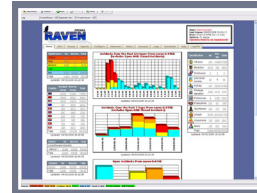

CIPGuard solutions technology allows you to conserve time and resources while lowering your overall CIP compliance costs by:

- Automating the creation and maintenance of the Critical Cyber Asset List and
- Automating work flow and document storage for required maintenance activities.

CIPGuard solutions aggregate information from your existing IT network appliances and protection devices without any need for costly IT infrastructure upgrades or re-architecting. Built-in Raven technology features include:

- Passive sensing technology enabling it to easily integrate into existing networks
- Inert integration feature minimizes install time and no disruption to existing IT operations
- Ability to manage and source all existing SCADA data feeds
- Inert integration feature minimizes install time and no disruption to existing IT operations
- Scalable from a single site to global enterprises with fully integrated, inter-enclaved operation reducing overall manpower and training requirements.

White papers are available describing the role that Raven plays with respect to implementing the controls needed to comply with FERC, FISMA, OMB A123, Sarbanes-Oxley, Gramm-Leach-Bliley, and HIPAA.

Do You Have the Right Tools to Track and Report Your NERC CIP Compliance?

Is Your Compliance Effort Labor-Intensive and Tying Up Valuable Resources?

Do Your Business Teams Have Access to Appropriate Tools to Fulfill Their Compliance Roles?
